Manifold Absolute Pressure Sensor

## Overview

The CPS171 is a resistive absolute pressure sensor solution with a fully calibrated pressure compensated analog output for low pressure applications, such as MAP (Manifold Absolute Pressure) systems.

The CPS171 solution comprises of an ultra-small resistive MEMS pressure sensor and a conditioning ASIC for accurate pressure measurements in factory calibrated ranges for the MAP applications. An integrated sigma-delta based ADC combined with internal calibration logic provides a high level analog output signal that is proportional to the applied pressure.

## 3 OPERATION MODE

The CPS171 is factory programmed in Update Mode only. Measurements are taken continuously.

## 4 OTP ROM

The OTP ROM array contains the sensor calibration coefficients and the configuration bits for the analog front end, output modes, measurement modes, etc.

## 5 CALCULATING OUTPUT

The pressure output is a linear transfer function between measured pressure and the input voltage.

### 5.1 PRESSURE OUTPUT

#### 5.1.1 Pressure Output Transfer Function

$$\text{Pressure (kPa)} = (V_{\text{out}} / 0.040476) + 0.117647$$

## 6 PACKAGE AND ASSEMBLY

The CPS171 is available in a small land grid array (LGA) package with a metal lid. There is a hole on the lid to allow for external pressure to the sensing diaphragm.
